AC Adapter for stir plate ….....	1	_____	_____
wash tub & soap & sponges….....	1	_____	_____
pH paper & dispenser	1	_____	_____
rubber stopper #0 solid	6	_____	_____
rubber stopper #1 solid	6	_____	_____
items not listed:			
_____	_____	_____	_____
_____	_____	_____	_____

HELPFUL HINTS

Iron rings:
They stay hot for several minutes after heating something on them. Always use caution when disassembling them following a lab.

Wire gauze:
When gauze is bent, the ceramic center will crumble and fall out making it ineffective.

plastic coating:
The plastic coating on the beaker tongs and some of the utility clamps will melt if it is placed too close to the Bunsen burner flame.

Share:
Seven other class periods use these items in the community drawer. DO NOT put any of this equipment into your assigned drawer.
There will be periodic unannounced inspections of lab drawers. If any of the community equipment is found in your drawer, a lab grade deduction will be made.

Stoppers:
Always lubricate with glycerin when inserting glass tubing.

Equipment in general:
Always put it away clean! Wash with soap & tap water, then rinse with distilled water, and let it air dry. Distilled water will not leave water spots when it evaporates.

I agree to pay for any of the above items at current replacement prices
if they are broken or lost while in my possession.
