

Online Homework Instructions

Chemistry I, AP Chemistry, and Physics

All Chemistry and Physics classes at Celina High School are now using the online homework services provided by WebAssign. Each student has been provided with a personal account. The account requires a **user name** and a **password**. The user name and initial password are assigned by your teacher. After you have logged in the first time, you should change your password to something personal that you will be able to remember. It would be best if you wrote it down somewhere just in case you happen to forget it. On the log-in screen you will see the following:

Username	
<input type="text"/>	
Institution	Use the username, institution, and password provided by your instructor or account representative.
<input type="text"/>	
Password	
<input type="text"/>	
<input type="button" value="Log In"/>	

You must use the username given you by your teacher.
The user name is NOT CASE SENSITIVE.

The institution is: **celina.oh**

You must then use the password given to you by your teacher.

After you log on, you simply follow the on-screen instructions for changing your password and completing the assignments.
